

Embodied eyes

Contemporary arts therapies

19th Nordic Art Therapy Seminar
17–19 June 2016, Helsinki, Finland

The poetic seminar theme: “Embodied Eyes – Contemporary Arts Therapies” frames our focus on the embodied intersubjectivity and the aesthetics of current arts therapies. All arts are built upon sensory experiences and the notion of embodiment has also become central in contemporary research of human experiences and interaction. In arts therapies the witnessing eyes have a crucial part

in affecting the therapeutic relationship. We aim to widen our view on visual art towards a broader scope of contemporary arts and research by focusing on embodiment and including all arts therapies in the seminar. We are expecting numerous inspiring workshops as well as presentations on current research focusing on the embodied aspects of human interaction, cognition, emotion and the arts.

More information of the paper call, conference fees, program and registration can be found from our website www.embodiedeyesseminar.com which will be open from 1.9.2015. Contact information: embodiedeyesseminar@gmail.com
